Roadmap

Abstract

The classical ongoing structure and operation of the Financial Global system have caused various concerns with the global financial crisis in 2008. The fact that the crisis could not be completely avoided is clear, and the solutions produced by the relevant institutions and countries could not provide permanence and tried to solve the problem by spreading it over time: "Print more money".

When viewed from this aspect, it is no coincidence that Satoshi published the Bitcoin whitepaper on October 31, 2008.

There are audiences who describe the development of Bitcoin from its birth to the present day as a "disruptive innovation/alternative". With Bitcoin, blockchain and cryptocurrencies have somehow entered our lives and the current financial system has had to revise itself. So much so that, although Bitcoin promised to highlight the concepts of fast, low-fee value transfer, it has evolved into the concept of "alternative value protection" over time.

One of the most important developments in the adventure that started with Bitcoin was undoubtedly the birth of Ethereum. Together with Ethereum, the concept of "smart contract" entered our lives and made very serious contributions to the concept of "financial freedom of individuals", which is one of the ultimate goals of blockchain and cryptocurrencies. Since the birth of cryptocurrencies, many cryptocurrencies based on concepts such as P2P value transfer, privacy, smart contracts have joined the ecosystem. Although the concepts of DeFi, NFTs and Metaverse have finally come to the fore, DeFi, which is the closest concept to the purpose of the creation of cryptocurrencies, continues to maintain its popularity and offer real use cases to users.

In this context, the birth of Bison Finance has just taken place and it will be presented to you in a short, concise and understandable way.

Our main motivation is as follows:

1. The current financial system should become more equitable and individual-oriented.
2. The contribution of blockchain technology and cryptocurrencies to the current economic order should continue in a way that benefits everyone.
3. Blockchain and DeFi are not an alternative to the current economic system, they are the future.
4. There are more than 1.5 billion people who do not even have a bank account. The ecosystem should appeal to everyone, including this audience, and everyone should benefit from it.
5. Although the risk of investment and trade belongs to individuals, Bison Finance platform should provide users with a useful and enjoyable experience. Anyone using the Bison Finance platform should take advantage of the platform and truly experience DeFi.

Problem

The unjust structure of the current economic system and the method and practices of finance centers to dictate financial developments to individuals are one of the biggest obstacles to individuals' financial freedom.

Since its existence, DeFi has been a game-changer, so to speak, trying to create alternatives to the current financial order. Philosophically, with DeFi, everyone should achieve their own financial freedom. Although these concepts sound good, they seem perfect in theory for the moment, but their application area is narrow in practice and they do not yet appeal to large audiences. DeFi must be globally applicable to the last individual so that it can grow in line with the purpose of its creation. As of now, there are many DeFi projects in the cryptocurrency ecosystem, but these projects all offer similar products. The main problem here is that even blockchain rather than DeFi in the global sense has not reached enough prevalence and is not used by large audiences in daily life. Still, many people are indecisive and ignorant about how to access major cryptocurrencies such as BTC and ETH. Additionally, using the products offered by many platforms seems to be somewhat complicated and risky, especially for individuals who are new to cryptocurrencies.

Our approach to the solution

It is clear that DeFi is the biggest alternative system that has been put forward for individuals to achieve their economic freedom. The use of DeFi platforms should be as easy and practical as banking systems so that the ultimate goal can be achieved. One of Bison Finance's core visions is simplicity and practicality versus complexity. We believe that making the brilliant vision of DeFi accessible and usable by the public will be one of the greatest benefits that can be offered to the crypto ecosystem. Bison platform, which has this as its biggest goal and was created for this purpose, will be used easily and comfortably by both experienced people and individuals who are new to cryptocurrencies and will play a big role in the adaptation to the blockchain.

People using the Bison Finance platform will be able to easily perform DeFi transactions thanks to the platform's simple interface, understandable and easy-to-use structure. They will also experience investing in the BIS token, which is the natural token of the Bison Finance ecosystem. The solutions offered by the platform to the ecosystem in order to protect and increase the value of the BIS token will also contribute to BIS token investors to achieve their economic freedom.

Introduction

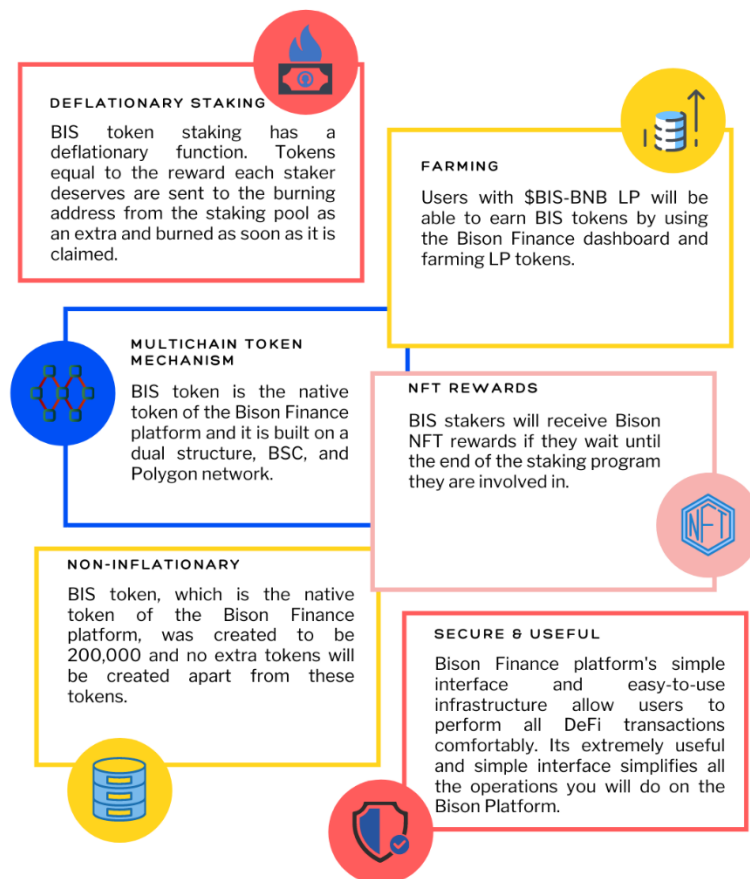

Bison is a simple, user-friendly, non-inflationary Multi-chain DeFi & NFT platform aimed at crypto holders to easily access DeFi.

Bison Finance platform provides you with various conveniences in safely storing and managing your crypto assets, as well as offering satisfactory returns with

advantageous income rates in your transactions. Using the simple and convenient interface of the Bison Finance platform, users can perform DeFi transactions such as staking, farming, asset transfer-purchase, swap on multiple chains (BSC & Polygon) and earn Bison NFT rewards.

Key features of Bison Finance

- 1- Deflationary Staking
- 2- Farming
- 3- Multi-Chain Token Mechanism
- 4- NFT Rewards
- 5- Non-Inflationary
- 6- Secure & Useful

1. Deflationary Staking

Although the Bison Finance ecosystem is non-inflationary, it is also somewhat deflationary, as the token and ecosystem mechanism have some deflationary features. One of these features, Deflationary Staking, provides additional motivation to holders by limiting the supply of BIS tokens and increasing the unit token value.

BIS token staking has a deflationary function. Tokens equal to the reward each staker deserves are sent to the burning address from the staking pool as an extra and burned as soon as it is claimed. In addition, all EWF tokens are also sent to the burning address and burned.

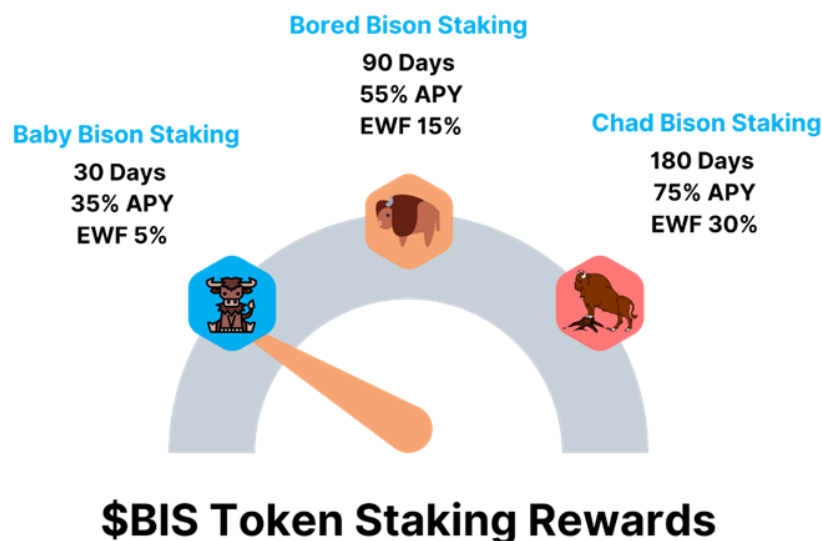

Example process: John gets 100 BIS rewards after 1,000 BIS stake transactions. When he receives the reward and principal, the tokens equal to the number of reward tokens John deserves are sent to the burning address and burned. This process continues until the token allocated for staking is reduced to half of its supply.

Bison stake dashboard is designed to be extremely useful. All those who want to stake BIS tokens need to have an BIS token and connect to the platform's dashboard through wallet integration.

There are 3 options for BIS token staking:

1. Baby Bison Staking: 30-days: 35% APY- EWF: 5%
2. Bored Bison Staking: 90-days: 55% APY- EWF: 15%
3. Chad Bison Staking: 180-days staking: 75% APY – EWF: 30%

- All EWFs will be burned.
- Minimum stake amount: 10 \$BIS

2.Farming

Users with BIS-BNB LP will be able to earn BIS tokens by using the Bison Finance dashboard and farming LP tokens. BIS token farming will continue for a total of 6M blocks (approximately 200 days), creating a passive income source for LPs. The APY will be calculated automatically by the contract. With a limited number of tokens allocated for farming and the potential value gain of the BIS token, it will be possible to generate farming incomes with high APYs.

3.Multi-Chain Token Mechanism

BIS token is the multifunctional native token of the Bison Finance platform and it is built on a dual structure, BSC and Polygon network. Both Binance Smart Chain and Polygon present significant advantages over Ethereum in terms of price and speed. While Binance Smart Chain has focused on creating its own thriving and diverse ecosystem, Polygon presents itself as an escape valve for Ethereum itself.

The Bison Finance ecosystem will provide DeFi transactions as a multi-chain designed to take advantage of the resolving aspects of both BSC and Polygon networks with its simple interface and useful platform.

BSC address: 0x36C85A7fD984460639Ae0e09fC94ceee45f53C02

Polygon address: 0x1A7F2C318c23c57C788751575845983c961cF646

4.NFT Rewards

Many NFTs of the Bison Finance ecosystem will be created and 3 of them are already available:

- Baby Bison
- Bored Bison
- Chad Bison

BIS stakers will receive BIS NFT rewards if they wait until the end of the staking program they are involved in. In this context, Baby BIS program stakers will receive baby BIS NFT, Bored BIS program stakers will receive Bored BIS NFT, and Chad Bison program stakers will receive Chad Bison NFT.

BIS NFTs created on the Polygon network and in limited numbers will increase the motivation of the stakers, which will encourage more staking of the Bison token.

5.Non-Inflationary

BIS token, which is the native token of the Bison Finance platform, was created to be 200,000 and no extra tokens will be created apart from these tokens. This detail is fixed by a smart contract. Bison Finance's economic model is not inflationary and has many deflationary features.

6.Secure & Useful

One of the goals of Bison Finance is to be an easy-to-use and simple DeFi platform. Therefore, the Bison Finance platform's simple interface and easy-to-use infrastructure allow users to perform all DeFi transactions comfortably. Its extremely useful and simple interface simplifies all the operations you will do on the Bison Platform. In addition, users' personal data is not collected and private keys are only available to users.

Use cases of BIS token

- BIS token can be owned by participating in the pre-sale or by purchasing it from the exchanges where the BIS token will be listed. BIS holders can keep their tokens as long-term investors if they wish, or they can perform trade transactions.
- BIS holders can experience diversification of their investments on different chains thanks to the multi-chain nature of BIS tokens.
- BIS token holders can stake/farm BIS tokens using the Bison Finance platform. In this way, they can earn passive income.
- BIS stakers gain additional advantages with the Bison NFT token rewards they will receive.
- Used as in-game currency between players.

Tokenomics

Total: 200,000

Pre-sale: 70,000 (%35)

Liquidity: 22,000 (%11)

Staking: 50,000 (%25)

Farming: 20,000 (%10)

Marketing: 8,000 (%4) - Locked for a month and 10% released every month after that.

Burned: 30,000 (%15)

Bisonmetrics

- Total supply will be 200,000 \$BIS
- Initial Circulating Supply 92,000 \$BIS
- All \$BIS tokens are pre-minted and no extra \$BIS tokens will be created. This means that \$BIS is not subject to inflation.

\$BIS Distribution Over Time
